

THE METASINO LITEPAPER

A play-to-earn in the metaverse

INTRODUCTION

Metasino is a decentralized virtual Casino built on the blockchain to be played in the Metaverse using the Metasino native token - \$CASINO. Participants all around the world will come to Casino City to play different casino games and win massive redeemable rewards. Metasino provides a multidimensional Casino experience combining the real world Casino with the multiverse.

Metasino implores creative game theory algorithms to ensure that all participants in the Casino City will abide by the community governance accordingly. Our unique staking and the locking mechanism will ensure all metasino player's worth are valued properly. This 'true worth' will ensure decentralization is maintained and whales do not interfere with the balance in Casino City.

At the same time, participants will be able to win massively and get to build mini Casinos, own properties and control a band of unique NFTs in the Casino City.

Our Unique Idea

Bringing the classic Casino to the Metaverse, playing with other real people in the Casino City, and owning properties.

Purpose

This is a detailed summary of Metasino and **how to participate, stake, engage with other participants and to embrace the world of decentralization.**

Blockchain and web3.0 is leading a massive disruption in the techsphere, but Casinos are not being carried along - Sure there are online Casinos but they are yet to embrace the world of decentralized, DeFI/Dexes have recently created.

This paper is not highly technical as we have tried to lay bare intricate terms to simplified English words that can be well understood.

CASINO GAME PLAY

Metasino is a Casino game played by wagering on Casino games with other participants from around the world.

To participate in the casino games, a user has to purchase Metasino gameplay chips with Metasino native token \$CASINO. Once the chips are acquired, a user can engage with other users to win massively.

Note that MetaSinoverse and MetaSino Metaverse mean one and the same thing and both can be used interchangeably throughout this lite paper.

Staking

Staking is done in different tiers according to \$CASINO token purchase

Discounts for a tiers accordingly for instance 50% off etc

Losing a game makes you lose discounted value, winning a game gives you full rewards

When you stake you earn. Your earnings can be redeemed for chips at a discount
